

SOUND THESIS CAPITAL

Strategic Wealth Restructuring

A Data-Driven 11-Year Blueprint to Financial
Independence

PREPARED FOR DR. MAYURI KALE

Structural Assumptions & Modeling Metrics

Conservative baseline parameters governing the projection model

Rate Assumptions (per annum)

Equity Return	12.0%
Debt Return	8.0%
Liquid Return	7.0%
Real Estate Yield	3.0%
Gold CAGR	10.0%
Inflation Rate	5.0%

Strategic Execution Rules

Monthly SIP Commitment	₹0.90 Lacs
Equity SIP Split	85.0%
Debt SIP Split	15.0%
Liquid Capital Cap	₹10.00 Lacs
Target Monthly SWP (Optional)	₹1.50 Lacs (today's value)

"Every projection is rooted in conservative, mathematical principles to ensure robust planning through market cycles."

Existing Capital Architecture

Total Base: ₹2.33 Cr — 58.7% in physical real estate, 15% idle cash

High Concentration Risk — Over half the portfolio is locked in illiquid real estate while 15% sits as idle cash eroding against inflation. Immediate structural rebalancing is required.

Current Holdings

Asset Class	₹ Lacs	%
Real Estate — Plots	112.00	48.0%
Gold — Physical	50.00	21.4%
Liquid — Cash	35.00	15.0%
Real Estate — Flat	25.00	10.7%
Mutual Funds — Equity	6.30	2.7%
Liquid — Funds	3.63	1.6%
Gold — Digital	1.33	0.6%
Total	233.26	100%

What is a Systematic Transfer Plan (STP)?

The mechanism to deploy large capital safely into the market

The Risk of Lumpsum

Investing ₹35L (or ₹112L from a land sale) all at once into the equity market exposes the portfolio to severe **timing risk**. If the market crashes the next day, the capital takes a massive, immediate hit.

The STP Solution

Instead, the capital is parked in a safe, low-volatility **Liquid Fund**. Every month, a fixed portion is automatically transferred (STP) into the target Equity/Debt funds. This ensures **Rupee-Cost Averaging**—buying more units when markets are down and fewer when markets are up.

Scenario A — Capital Deployment via STP

Retaining land. Deploying idle cash via Systematic Transfer Plan — not direct equity.

All capital flows through liquid fund first. The entire ₹35L surplus is parked into a liquid fund. From there, a **Systematic Transfer Plan (STP)** gradually deploys capital into the equity/debt portfolio at the 85/15 split. This ensures rupee-cost averaging and eliminates market-timing risk. ₹10L retained as emergency buffer.

Post-STP Allocation

Asset	₹ Lacs	%	Asset	₹ Lacs	%
RE Plots	112.00	48.0%	RE Flat	25.00	10.7%
Gold	50.00	21.4%	Liquid Funds	10.00	4.3%
MF Equity	30.82	13.2%	MF Debt	5.44	2.3%
Total				233.26	

Projected Portfolio CAGR: ~5.98% Nominal | ~0.93% Real

Scenario B — Maximum Growth via STP

Post land sale (market-dependent). Proceeds deployed via STP — never directly into equity.

Contingent on equity market conditions. When markets improve and the land is sold, the entire ₹112L proceeds flow into a **liquid fund first — never directly into equities**. An STP then systematically transfers capital into the 85/15 equity-debt portfolio over time, ensuring disciplined entry and rupee-cost averaging.

Scenario B — Post-Reallocation

The resulting asset allocation after successful STP deployment.

Asset Allocation Breakdown

Asset Class	₹ Lacs	%
MF Equity	126.02	54.0%
Gold — Physical	50.00	21.4%
Real Estate — Flat	25.00	10.7%
MF Debt	22.24	9.5%
Liquid Funds	10.00	4.3%
Total	233.26	100%

Projected Portfolio CAGR:
~10.01% Nominal | ~4.77% Real

The Compounding Engine & Risk Mechanics

Two non-negotiable rules ensuring capital outpaces inflation

Systematic Injection

₹90,000 /month

Allocated via an 85% Equity / 15% Debt split to maximize long-term compounding potential.

Capital Efficiency

₹10L Liquid Cap

Excess liquidity is automatically swept into market-linked growth instruments.

"Risk is not avoiding the market — it is entering it without a mathematical framework."

11-Year Portfolio Accumulation Trajectory

Combined portfolio growth (Nominal vs. Real) to critical mass · All figures in ₹ Lacs

Year	Equity	Debt	Gold	RE	Liquid	Nominal	Real
Y1	150.32	25.64	55.00	25.75	10.60	267.31	254.58
Y2	177.54	29.31	60.50	26.52	11.24	305.11	276.74
Y3	208.03	33.28	66.55	27.32	11.91	347.09	299.83
Y4	242.17	37.56	73.21	28.14	12.62	393.70	323.90
Y5	280.41	42.18	80.53	28.98	13.38	445.48	349.04
Y6	323.24	47.18	88.58	29.85	14.18	503.02	375.36
Y7	371.21	52.57	97.44	30.75	15.04	567.01	402.96
Y8	424.93	58.40	107.18	31.67	15.94	638.12	431.90
Y9	485.10	64.69	117.90	32.62	16.90	717.21	462.31
Y10	552.50	71.48	129.69	33.60	17.91	805.18	494.31
Y11	627.98	78.82	142.66	34.61	18.98	903.05	527.99

*LIQUID COMPOUNDING INTERNALLY AT 6% · INFLATION: 5%

Growth Curve (Nominal vs. Real)

Asset Class Evolution Over 11 Years

Structural shift: Equity becomes dominant via differential compounding

The Distribution Phase — Age 45 Transition

At Age 45, the portfolio reaches critical mass. SWP is an optional income layer.

YEAR 11 TERMINAL CORPUS

₹9.03 Crore
(₹5.28 Cr Real Purchasing Power)

Critical Mass Achieved

Portfolio achieves sufficient scale to sustain perpetual inflation-adjusted yields without depleting principal.

SWP Option Available

An optional Systematic Withdrawal Plan (SWP) can be activated. Today's ₹1.50L/month need equals ₹2.57L/month at Age 45 after 11 years of 5% inflation.

Risk Mitigation

The continuous 15% debt SIP allocation acts as a built-in stabilizer, buffering against sequence-of-returns risk during any withdrawal phase.

OPTIONAL

Inflation-Indexed Withdrawal Strategy

35-year SWP projection · Today's ₹1.50L/month = ₹2.57L/month at Age 45 after 5% inflation

Today's monthly need of **₹1.50 Lacs** grows to **₹2.57 Lacs** by Age 45 (Year 11) at 5% annual inflation. If the optional SWP is activated, it runs for 35 years (Age 45→80), with withdrawals increasing each year to preserve purchasing power.

35-Year SWP Projection (every 5 years)

Age	Year	₹ Lacs / Mo	Inflation	Corpus Left (Lacs)
Today	0	1.50	1.00x	-
45	11	2.57	1.71x	903.05
50	16	3.28	2.18x	1,205.99
55	21	4.19	2.79x	1,623.17
60	26	5.34	3.56x	2,203.59
65	31	6.82	4.54x	3,019.78
70	36	8.70	5.79x	4,179.95
75	41	11.11	7.39x	5,846.84
80	46	14.18	9.43x	8,266.82

Execution Roadmap

Sequential implementation protocol — STP-first deployment

Park & Deploy via STP

Park idle cash (₹35L) into a liquid fund. Set up STP to systematically deploy into 85/15 equity-debt split. Prevents direct lump-sum market-timing risk.

Establish Monthly SIP

Initiate ₹90,000 monthly SIP with 85% equity, 15% debt allocation. This is the primary accumulation engine running for 11 years.

Annual Rebalancing

Conduct structured portfolio reviews and rebalance to maintain the 85/15 target allocation across asset classes.

Land Sale

When equity markets are favourable, sell plots (₹112L). Deploy proceeds strictly via STP through liquid fund to reach target 85/15 allocation.

Age 45: SWP Initiation (Optional)

If income replacement is needed, activate the optional SWP. Today's ₹1.5L/month need equals ₹2.57L/month at Age 45. SWP runs for up to 35 years, inflation-adjusted annually.
